Article no.: 2210 TOTALSTOP-central brake system

Innovative, comfortable, ergonomic and safe: This brake system developed by fetra can be easily locked or released with only one foot. Apart from the rotation of the wheels, also the swivelling movement of both swivel castors is securely locked. This avoids hazardous situations by preventing the braked cart from swinging sideways. Due to its central location, the brake pedal is always visible to the operator and can be operated in any position of the castors. The rubber wheel locking device is effective on all tyre materials and can be very easily readjusted.

Technical Details:

Colour	galvanised
Note	surcharge on standard wheel set
Weight (kg)	0,8
Country of origin	Germany
Warranty (years)	10
Customs tariff number	87168000
GTIN	4017976822105
