

HEEL SHOCK ABSORPTION ELEMENT BLUE

ITEM NO.: Z80014

HEEL SHOCK ABSORPTION ELEMENT BLUE OVER 105 KG

FEATURES

The exchangeable heel shock absorption element ensures the proper cushioning for every wearer's individual requirements. It's in this way that the pressure located in the shoe is naturally reduced, targeted to relieve the back.

Wearers varying in weight exert a different amount of pressure on the shock absorption element, which consists of an insole, shock absorption element and outsole that is made of elastic materials. The exchangeable SECURA VARIO® heel shock absorption, that is available in four varying weight categories, ensures that every wearer obtains the optimal amount of cushioning.

With the honeycomb structure of the SECURA VARIO® module the cushioning characteristics in the shoe are maintained consistently good throughout the entire life cycle of the shoe.
