As installation spaces become increasingly confined, it is necessary that tools enable users to work successfully even in such situations. Narrow spaces require additional placement points of the tool. Can spanners be modified to increase the placement possibilities of the tool? The combination of the 7.5° offset open end and the double hexagon geometry doubles the placement points. A repeated 180° turn of the wrench around the longitudinal axis during screwdriving provides four placement possibilities, and bolts or screw heads can be engaged every 15°. The Joker 6003 with its smart open end geometry significantly expands the range of uses in confined spaces. The Joker 6003 will automatically find the respective placement point after every turn. The slim yet robust ring side is tilted by 15° to the tool axis. The high-quality surface treatment achieves a high and long-lasting corrosion protection. With Take it easy tool finder: Colour coding by size. The wear-free material of the clip guarantees easy removal and a secure hold of the spanners.

Secure hold and easy removal

For very tight spaces

Useful clip

The wear-free material of the clip guarantees easy removal and a secure hold of the spanners.

The Joker 6003 ring spanner with its special open end geometry open end offset by 7.5° and the double hexagon profile - doubles the placement possibilities when repeatedly turning the wrench 180° around the longitudinal axis. Bolts and screw heads can be "accessed" every 15°. The Joker 6003 will automatically find the respective placement point after every turn.

# Joker 6003: For return angles of less than 30°

Thanks to the open end side offset by 7.5°, double hexagon geometry and an adjusted application method (placement - screwdriving - turning - replacement screwdriving - turning, etc), even screwdriving challenges allowing a return angle of less than 30° can be solved.

## **Double-hex geometry**

The double hexagon geometry on the open end and ring sides secures the positive connection with the screw head or bolt and reduces the risk of slipping.

## Joker 6003: Tilted ring side

The ring side is tilted at 15° to the tool axis to prevent injury.

Take it easy tool finder

Take it easy tool finder system with profile and size colour-coding for quick and easy tool selection. Colour-coded system for hexagon drive screws (L-Keys, Zyklop bit sockets), external hex drive screws and nuts (Joker wrenches, Zyklop sockets and Zyklop bit sockets with holding function), and TORX® drive screws (L-Keys, Zyklop bit sockets).
