

WT-019 Puller set – Separating puller

DESCRIPTION

The puller assortment for separating extraction is a wall panel equipped with suitable tools for use and storage in workshops and industry. The assortment includes the 2-jaw bearing puller "Cobra" in two different sizes, as well as several separating and extraction devices. This allows parts to be initially gently separated from their seating, before they can then be externally extracted.

RANGE OF APPLICATION

For use and storage in workshops and industry.

BENEFIT

- Compilation based on many years of experience for application in various industries
- Central availability of the products for every employee
- By storing on the wall panel, the completeness of the assortment is visible at a glance.
