FLOWDRILL

Parting agent, Contents in l or kg: 1

Order data

Order number	082741 1
GTIN	2050001740304
Item class	04D

Description

Version:
Separating agent for the flow drilling process.
Description:
The high speed and frictional heat creates local high temperatures which plastify all types of metallic materials. This allows a bushing to be created in a variety of thicknesses of materials, without chips, in just a few seconds.
The polygon contour of the carbide flow drill generates frictional heat which plasticises all types of metal materials. This allows closed apertures to be created in a variety of thicknesses of materials, without chips, in just a few seconds.
Advantage:
- **Large savings of time and costs compared to conventional processes (such as drawn-on nuts).**
- **Generates no chips or swarf; supersedes rivet nuts, weld nuts and press nuts.**
- **Solid basis for threads with high pull-out forces.**
- **For all popular material thicknesses and thread sizes (threads to DIN 13).**

Technical description

Temperature range	-15 °C

Contents in ltr or kg	1
Consistency	paste
Type of product	Separating agents
