| GTIN | 2050000973352 |
| Item class | 49D |

Description**Version:**

The modular design of probe holder and removable probe modules allows the facility of exchanging manual and automatic probe modules without laborious recalibration. For probes with RENISHAW automatic holder (autojoint), a PAA adapter has to be used.

The TP20 probe module contains the electro-mechanical sensor, carries the probe inserts (connection thread M2) and permits the probe movement in $\pm X$, $\pm Y$, and $\pm Z$ direction ($\pm Z$ if the TP20 6-way probe module is used). Seven application-specific probe modules are available. Their different gauging forces are indicated by different protective cap colours.

Technical description

| | |
|-----------------|--------|
| Gauging force | high |
| Colour of cap | red |
| Type of product | Probes |
